Data Cleaning Peer Assignment – code book

data_Set: either the logged information in the training or test set.

data_name: the name of the activity represented by an integer.

subject: The subject id. 30 persons are each represented by a number between 1 and 30.

train_full: the combined table of subject, data_name and data_set.

test_full: the combined table of subject, data_name and data_set.

df_full: the merged train_full and test_full data. Here only the mean and standard deviation of the dataset is kept for each observation.

df_reduced: mean of mean and mean of standard deviation by activity.
